

# Chronic knee pain?

*You have options.*

If you suffer from chronic pain or aching in your knee, you may have **osteoarthritis (OA)** - a painful joint condition that can interfere with everyday life.

If you have chronic knee pain or have been diagnosed with knee OA, you may qualify for a new clinical research study. The study is exploring the effect of an investigational injectable medication for chronic knee pain.

If you qualify and choose to join the study, you will receive study-related care at no cost, and will also be compensated for your time and travel to attend study visits.
